

Warm and Potentially Dry Early to Mid March

Shown at right are the Climate Prediction Center (CPC) 6-10 and 8-14 Day temperature and precipitation outlooks produced on March 3rd and valid from March 9th through March 17th.

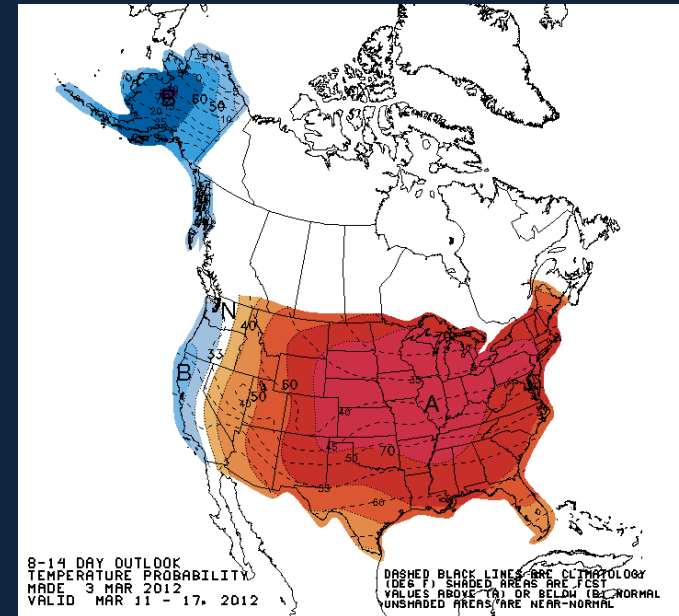

The orange and red shading in the temperature outlooks represents a high probability for above normal temperatures across western and central North Dakota.

The tan and brown shading in the precipitation outlooks represents the potential for below normal precipitation across western and central North Dakota during early and mid March.
